

## Exercise – 7

## Profile Servlet using Session and MySQL

Implement Profile Servlet using Http Sessions. The specifications are given below.

### Specifications:

1. The login page should contain username, password and login button and logout button. On clicking login button should invoke LoginServlet.
2. The LoginServlet should store the username in session for viewing his profile and should display a message "Welcome username".
3. The LoginServlet should also display a link "View Profile in Detail". The link when clicked, should invoke ProfileServlet.
4. ProfileServlet should display the username retrieved from the session with the message "Welcome **username** to the profile page" and should retrieve & display the detail information of the user from the database in that page. It should also displays a link to the Login page to logout.
5. When Logout button is pressed, should invoke LogoutServlet.
6. LogoutServlet should invalidate the user session and should display "Successfully Logged out"
